

MODEL D

PRESSURE REDUCING REGULATOR

The Model D is Cashco's primary general service, self-contained, pressure reducing regulator. Unit handles inlet pressures up to 400 psig (27.6 Barg) and outlet pressures from 2-250 psig (.14-17.2 Barg) in multiple spring ranges. Model D is utilized for the majority of industrial pressure reducing applications.

MODEL D

FEATURES

- Versatile:** Five body materials and thirty-one trim material combinations to select from.
- Tight Shutoff:** Composition seats of V-TFE, NBR, EPR, or FKM.
- Capacity:** Handles mid-range flow rates on a line size basis.
- Pressure Drop:** Handles mid-range pressure drops while maintaining good stability. Optional Stabilizer provides up to 350 psid (24.2 Bard) capability for gaseous service.
- Flow-to-Close Plug:** Incorporates the typical reducing regulator internal design.
- Incorporated Cylinder:** Plug is guided through its travel by the cylinder, which also serves to block harmful debris from entry to the seating surfaces.
- Overpressure Travel Stop:** In the event of downstream over-pressurization, diaphragm over-travel is restricted by mechanical stops.

APPLICATIONS

Used in all types of fluids, including cryogenic liquids and gases, sour gas, industrial gases, chemicals, as well as the common industrial fluids - water, oil, steam and compressed air.

NOTE: Where "HI DP" is indicated, the actual pressure drop has exceeded the recommended limits of Table 2.
Where "SONIC" is indicated, outlet velocity with Schedule 40 pipe exceeds sonic velocity of 1118 fps. Additional flow cannot be obtained, and pipeline velocity is in excess of customary pipe velocity design limits. Flow will be approximately the last indicated value in the column above "SONIC".

Recommend use of Opt-4 Stabilizer.
